Abstract

Work attachment is the degree to which a person psychologically identifies himself with his work. This study investigated the attachment that the teachers of Government and Government-aided colleges have towards their work and how they prioritize their needs. Accordingly, a group of 120 college teachers (60 from government colleges and 60 from government-aided colleges) were selected as sample. A general information schedule, work attachment questionnaire and priority need questionnaire were used as tools. The findings reveal that work attachment of both groups of teachers is moderate. But duration of service period takes an important role in this regard. Work attachment of the teachers who are engaged in government colleges and whose duration of service is 10 years or less is better than those whose duration of service is above 10 years. On the contrary, no significant difference was observed for the government-aided colleges. Findings also revealed that priority need as expressed by two groups of teachers differ significantly in some areas.

Research Design

A group of 120 teachers (60 from Government and 60 from Government–Aided colleges across Kolkata) were selected as the sample. They were between the ages 30 to 50 years and their duration of service is below and above 10 years. Tools as such General Information Schedule that consists of name, address, age, gender, duration of service etc.; Work Attachment Questionnaire that consists of 50 statements answerable in a five point scale from strongly agree to strongly disagree where high score indicates good work attachment and vice versa. Odd-even split-half reliability is 0.82; Priority Need Questionnaire that consists of set of 6 priority needs viz., good pay package, significant role in the hierarchy, comfortable workplace, friendly work environment, job inspiring a creative instinct and job offering incentives after regular appraisals were considered to be ranked according to the priority of the respondents.

General Information Schedule, Work Attachment Questionnaire and Priority Need Questionnaire were administered to the subjects. Data were collected and properly scrutinized. Scoring was done with the help of standard scoring key. Mean and SD were calculated for work attachment questionnaire. Rank was done for priority need questionnaire. Comparisons were made by applying t-test and chi-square.

Results and Interpretation

The data inserted Table-1 reveals that there seems to be indication of moderate level of work attachment as expressed by the teachers of government and government-aided colleges across Kolkata. Analysis of data reveals that the government college teachers are happy with their job security and hefty pay package. On the other hand, the government-aided college teachers are satisfied with the significant role they play in the decision-making processes, comparatively less competition and the scope to work together in case of crises. Overall picture reveals no significant difference between the two groups. Thus, the Hypothesis - I is rejected.

</tr>
</tbody>
</table>

Score – range: 50 to 200 * Difference is insignificant

Comparison was made between the male and female group of teachers of the government colleges of Kolkata in terms of work attachment. No significant difference between the two groups. The Hypothesis -II is also rejected

</tbody>
</table>

* Difference is insignificant

Data inserted in Table - 4 reveals that work attachment as expressed by the teachers of the Government colleges whose service is below 10 years is comparatively better than those whose service in above 10 years. The analysis of data reveals that scope of self development and comparatively less fatigue to carry out the job are the main reasons behind this. When comparison was made between the two groups, significant difference was observed. Thus, the Hypothesis - IV is accepted.

Thus, the Hypothesis – VI is accepted for the assessment of 1st, 2nd and 3rd ranks, and is rejected for 4th, 5th and 6th ranks in this investigation.

Concluding Remarks

The significant highlights of the study may help to create a congenial work environment considering the work attachment of the teachers in educational institutions. Incentives are remotely available for the teachers in most of the educational institutions. This can be a potential factor because of which, some teachers feel the lack of scope of self-development in their job. Incentives can not only motivate the teachers to perform well, it can also improve the overall working climate of the institutions. The teachers of the government-aided colleges have expressed slight apprehension about their job security. Appropriate measures should be taken to ward off this feeling of insecurity, as it can result in the feeling of alienation towards the job, which is very detrimental to the whole educational scenario of those institutions. Care should also be taken to create a pleasant working environment which will finally lead to much better educational environment in comparison to the existing setting.
